

ONLY SAILOR® BRINGS YOU LIVE SPORTS OUT HERE

WELCOME TO ANOTHER LEAGUE

“It’s been 23 days since I saw my kids. Another 7 until leave. Supposed to be high winds and rain on my shift. Sure would be nice to catch the playoffs when it’s done.”

SAILOR Satellite TV systems meet a commercial grade standard – and Thrane & Thrane strives to raise that standard every day. A fact that our fans appreciate.

BUILT SPECIFICALLY FOR MARITIME PROFESSIONALS

The people who work aboard ships are another, hardier breed. Now there is a satellite TV system built just for them.

SAILOR Satellite TV systems are designed specifically to meet the demands of maritime professionals. Constructed of the most rugged materials and sophisticated technology, they withstand even the toughest conditions. But that does not mean they ignore “softer” values like reliability, convenience and service. SAILOR Satellite TV systems have everything the professional sailor needs. They are available in two sizes: SAILOR 60 Satellite TV and SAILOR 90 Satellite TV.

ENHANCES CREW WELFARE

Team spirit is just as relevant on deck as on the playing field. And while TV is not a necessity at sea, most would agree it plays a significant role in recruiting and retention. With SAILOR Satellite TV, it is easy to enhance life on board.

FOR ANY SHIP, ANYWHERE

SAILOR Satellite TV systems are suitable for virtually any ship, from smaller craft and coastal vessels to offshore and commercial ocean-going vessels. And since they work with satellites all over the world, they help keep your crew entertained, educated – and satisfied.

YOUR LINK TO RELIABLE RECEPTION UNDER ANY CONDITIONS

Hardware and software are fully optimized to lock onto – or reacquire – satellite signals quickly and automatically.

ADVANCED TECHNOLOGY LOCKS ONTO THE SIGNAL

No matter where or under what conditions your vessel sails, SAILOR Satellite TV delivers reliable reception. With the industry's most advanced tracking technology, multiple tracking methods, fast satellite acquisition and an extra-wide elevation range, the signal is locked in – even when travelling for long distances, in rough seas or in polar waters.

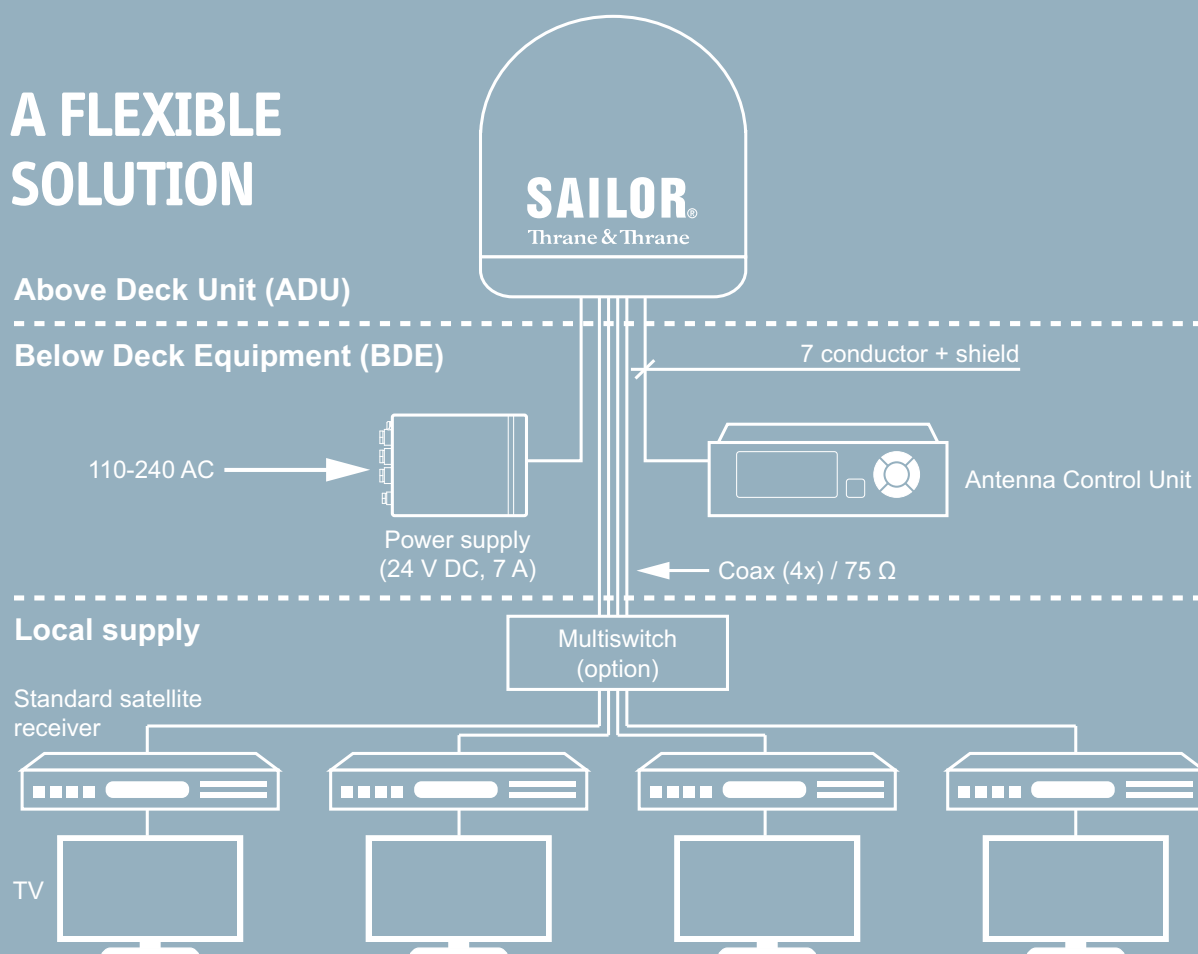

3RD GENERATION PLATFORM

SAILOR Satellite TV systems are the result of extensive development of an existing product to create the best system on the market.

SAILOR 60 Satellite TV and SAILOR 90 Satellite TV

A FLEXIBLE SOLUTION

The flexible SAILOR Satellite TV solution takes into account the very different needs each ship might have, and therefore lets you choose exactly which local multi-switch and satellite receiver option/supplier you prefer.

“Dynamic skew control” for example – the addition of an artificial third axis to the antenna to make it easier to keep the signal – enables the antennas to adjust automatically, with no interference from the user. Software and hardware are optimized as well to find the satellite signal quickly and keep the signal steady.

The SAILOR system also features an extended elevation range. Because of the Earth’s curvature, negative elevations are particularly important when sailing in Nordic regions.

SKY-HIGH STANDARDS

With probably the most ambitious internal test criteria in the industry, we have put SAILOR Satellite TV systems through a battery of demanding tests – and improved anything that did not meet Thrane & Thrane’s strict standards. Tests for vibration, temperature, waves and safety are just some of the parameters we thoroughly investigate.

Since we devote much of our turnover to R&D, you can rest assured that our technology is not just valid today – it is also anchored in constant improvement.

A WINNING TEAM TO SUPPORT YOU

SAILOR Satellite TV systems are compatible with all major satellite service providers. No matter where you are in the world, you also are always close to one of Thrane & Thrane's On Board Service Centers (see map).

THE INDUSTRY'S BEST SERVICE NETWORK

Whether or not your vessel is a trawler, you get a net – a safety net – with SAILOR Satellite TV. We have the industry's most extensive, skilled network of service professionals, and our On Board Service Centers are strategically placed around the world to ensure prompt, professional service. These service experts must meet rigorous criteria before earning the right to meet your service needs.

EASY OPERATION

Because sailors have enough to do without mastering a complicated TV system, we also make it simple to ensure reliable entertainment on board.

Give your team on board something to cheer about with SAILOR Satellite TV systems!

A user-friendly control unit with intuitive interface makes operating SAILOR Satellite TV systems easy.

Menu choices cover what you need, without an overwhelming list of options. Installation is straightforward, and installing satellite locations is a breeze. For maintenance, updates or adjustments, the control unit also has an easily accessible USB interface.

Entering a new satellite territory? No trips above deck – just follow a few easy steps on the control unit.

WORLDWIDE COMPATIBILITY

SAILOR Satellite TV systems have horizon satellite memory banks with automatic scanning and storage. This means that if you come to a new location where there are no existing satellites in your library, you can use SAILOR software installed on a laptop to ask the antenna to scan the horizon for a satellite. When it finds one, it adds the new satellite to your library.

So no matter where you are in the world, your team has something to cheer about with SAILOR Satellite TV.

WORLD LEADER IN MARITIME COMMUNICATION

A passion for innovation, proud traditions and our legacy in maritime communication equipment provides a unique platform for the development of reliable and technologically advanced products for seafarers all over the world.

Thus, Thrane & Thrane is the world's leading manufacturer of global satellite and radio communications equipment and we are proud to be able to offer a complete selection of reliable, innovative and user-friendly solutions for use at sea.

THE SAILOR® OF THE WORLD

The renowned SAILOR brand in itself represents more than 50 years of experience in developing and refining maritime communication. We are matching the communication needs of the biggest ocean going vessels, fish- and workboats of any kind and

exclusive leisure yachts and sailboats in every spot of the world.

The portfolio includes maritime products from portable radios, VHF and MF/HF, Inmarsat C terminals, to complete GMDSS systems including LRIT and SSAS solutions, and a full range of maritime satcom products including Iridium, Mini-M, Fleet, FleetBroadBand, VSAT and satellite TV.

WORLDWIDE ON BOARD SERVICE

Thrane & Thrane is famous for its World Class Service program. A network of On Board Service Centers offers on board service and repair all over the world. Every measure is taken to provide efficient first-time-fix support. We know that time is crucial for ship management, and we are proud to be your reliable service partner in any harbor at any time.
